PRODUCT OVERVIEW

ADVANCED FORMULA

ECOFIPRO GEL is a premium insecticide designed for the effective control of cockroach populations. It features a unique bait matrix that remains palatable for extended periods, ensuring continued acceptance even by bait-averse strains.

Active Ingredient: Fipronil (0.05g) - A potent slow-acting poison that enables the transfer of the toxicant.

KEY FEATURES

FAST ACTING

Visible results within days. Quickly reduces population numbers, providing immediate relief from infestations.

RESISTANCE BREAKING

Specially formulated to attract and kill cockroaches that have developed resistance or aversion to other standard gel baits.

LONG LASTING

The gel remains moist and attractive to pests for up to 3 months, offering continuous protection and reducing re-application frequency.

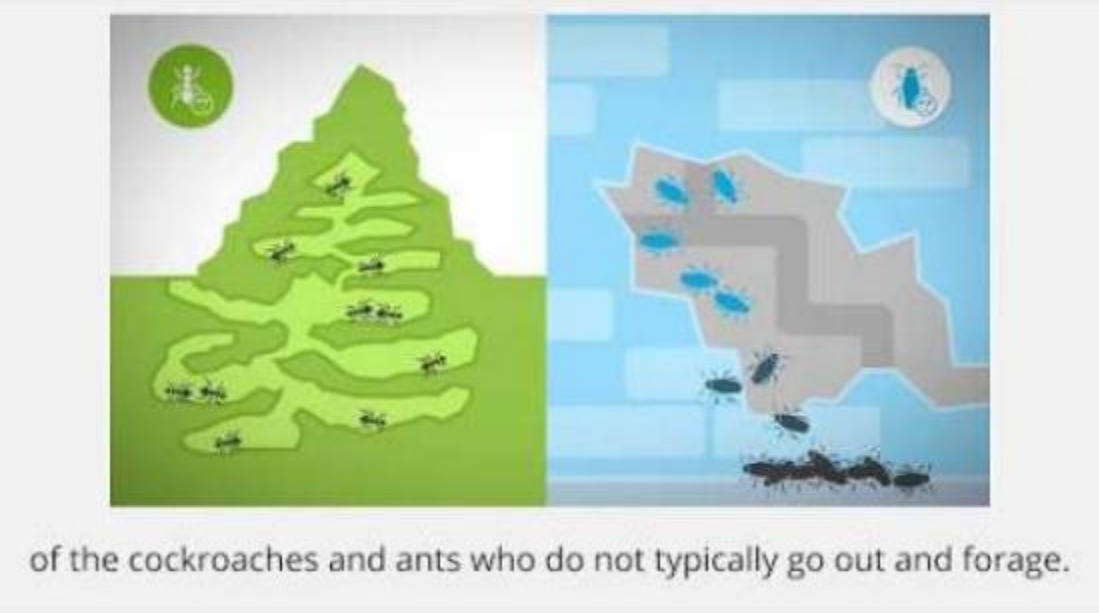

TARGET PESTS

ECOFIPRO GEL is effective against a wide range of cockroach species, making it a versatile solution for diverse environments.

- **German Cockroaches:** Including bait-averse strains common in commercial kitchens.
- **American Cockroaches:** Large, sewer-dwelling roaches often found in basements.
- **Oriental & Brown-Banded Cockroaches:** Effective control for less common but persistent species.

THE DOMINO EFFECT

MULTI-LEVEL CONTROL

The "Domino Effect" (Secondary Kill) is crucial for total colony elimination.

1. **Ingestion:** Foraging roaches eat the gel bait.
2. **Return:** They return to the harborage (nest) and share the bait via regurgitation or feces.
3. **Elimination:** Other roaches, including nymphs that never leave the nest, are poisoned and die.

USAGE INSTRUCTIONS

Small Spots

Apply small spots of gel, about the size of a grain of rice (0.1g - 0.5g).

Don't Spray

Do not spray other insecticides on or near the gel, as it will repel the roaches.

Monitor

Check bait placements regularly and re-apply if the gel has been consumed.

HOLD ON!

What if there's no bait station?

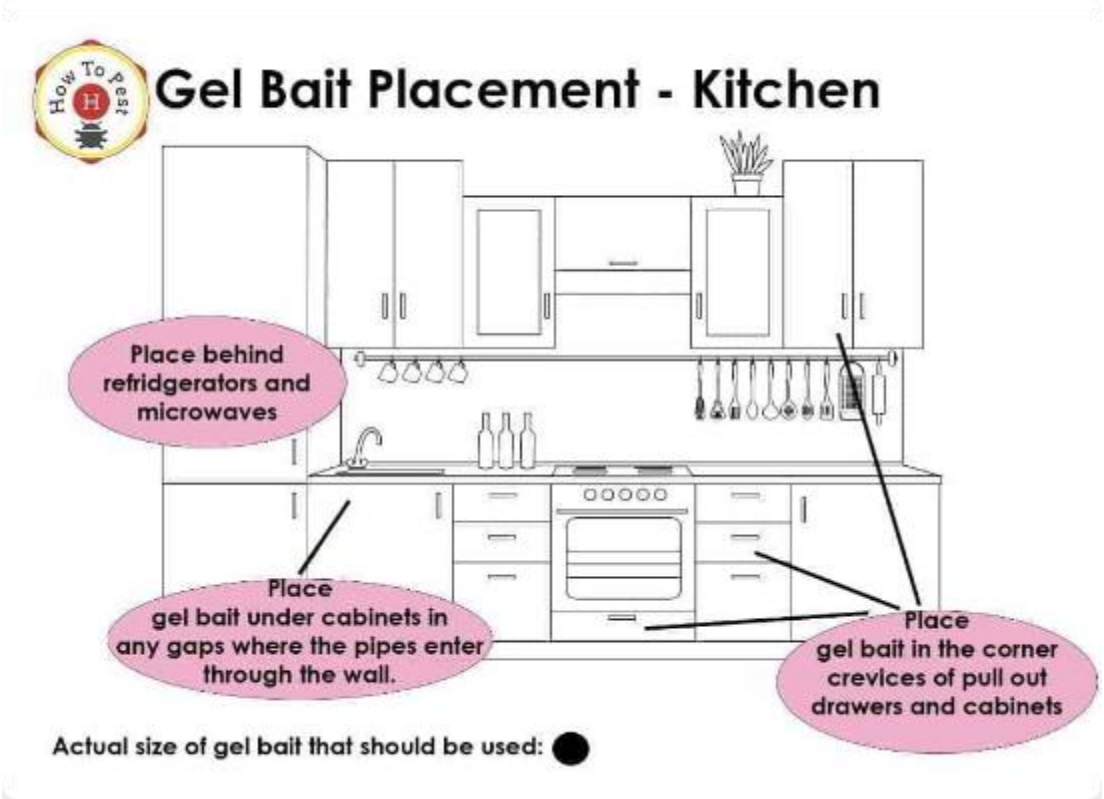

It's fine. Just squeeze a grain of rice-sized amount onto plastic, coated paper, or thick paper that won't absorb the bait, and install it.

STRATEGIC PLACEMENT

FOCUS ON HARBORAGES

Apply the gel in cracks, crevices, and corners where cockroaches hide and travel. Avoid open, easy-to-clean surfaces.

- Behind refrigerators and stoves
- Inside cabinet hinges and corners
- Under sinks and around pipe penetrations
- Behind bathroom mirrors and toilets

IDEAL ENVIRONMENTS

KITCHENS & FOOD PREP AREAS

ECOFIPRO GEL is ideal for sensitive areas like kitchens. Its low toxicity to humans (when used as directed) and targeted application method make it safe for use in residential homes, restaurants, and hospitals.

Always follow the label instructions for safe application around food handling areas.

"ECOFIPRO GEL: The smart choice for total cockroach elimination."
